

## **Mobile Health — QA Engineer, Software Implementation — Work from anywhere in the U.S.**

Mobile Health is looking for a QA Engineer to help us continue on our mission to change the healthcare system.

Mobile Health has quickly become one of the largest and fastest-growing digital healthcare SaaS platforms in the U.S. Our goal is to help our customers make a culture of health simple.

Mobile Health provides communications, incentives, tools, and real-time analytics that individuals and employers can use to improve workforce health and overall wellbeing for employees and their families. We have millions of users and hundreds of employers on our platform working to improve their health and fitness, and reduce their healthcare costs.

### **Why Join Mobile Health?**

- We work with great technology
- We have an amazing team (experienced, creative people; collaborative environment; lots of important work to do)
- We have an incredible product (growing healthcare space, happy customers)
- We make a real difference for our customers (and their employees)
- We offer industry-competitive compensation and benefits

### **Job Description**

#### **QA Engineer — Software Implementation**

The QA Engineer will use both manual and automated test strategies to ensure the highest level of quality for our product implementations.

#### **Primary Responsibilities**

- Design and perform quality assurance testing on UI and back-end platform configurations for customer delivery of product implementations
- Create and execute sophisticated and practical testing at all levels, such as regression, integration, UAT, performance, etc., to ensure delivery of consistent and reliable solutions for our customers
- Conduct impact analysis to identify downstream effects from our SaaS platform enhancements and changes; analyze risks and mitigation approaches

- Collaborate with Product, Product Innovations, and Engineering Teams to understand functional and non-functional requirements, translate to test plan/test cases, and ensure deliverables meet our corporate and customer expectations
- Balance quality outcomes with product timelines
- Communicate testing requirements, status, issues, and risks with stakeholders

## **Qualifications**

- B.S. or higher in Software Engineering, Computer Science, or related field
- 5 or more years of experience in software QA and/or development, including testing web applications, iOS, and Android-native apps
- 5 or more years of experience with Python, JavaScript, HTML/CSS
- Experience and familiarity with web page design and implementation, DevTools, and Web APIs
- A strong understanding of UX best practices, cross-browser compatibility, and responsive web design
- Hands-on experience with automation or mobile testing frameworks, such as Selenium and Appium (these would be pluses, but are not an absolute requirement)
- Disciplined and able to work remotely from your home; you'll need a workspace with a reliable internet connection, but we'll provide you with a computer
- Authorized to work in the U.S. without sponsorship; no third-party agencies
- Willing to undergo a background check in accordance with local law/regulations
